

Sentry HPS

SENTRY HPS HM/HT provides maximum protection for vital 'mission-critical' networks, security applications (electro-medical) and industrial applications thanks to its outstanding mechanical and electrical design. The load is powered continuously by the inverter with a filtered, stabilised and regulated sinewave supply. The input and output EMI filters considerably increase the immunity of the load to mains disturbances and surges. The SENTRY HPS HM/HT series uses on-line double conversion technology (VFI) with an isolation transformer on the inverter output. SENTRY HPS HM/HT is supplied with Watch&Save 3000 software as standard and can be remotely monitored using the PowerNetGuard system from anywhere in the world. Additional battery extension packs allow the standard battery runtime to be extended up to several hours.

MINIMUM IMPACT ON SUPPLIES - EASY SOURCE

Input current distortion <4% for the Sentry HPS with filter with sinusoidal absorption to remove the risk of resonance with other input supply users or phase shift capacitor sets. The absorbed current distortion is independent of input supply parameters such as impedance. This enables Sentry HPS to deliver maximum performance levels regardless of the installation environment. With these input features Sentry HPS can achieve significant savings in terms of sizing and power supply sources - isolation transformers and generators over less sophisticated power systems.

MAXIMUM BATTERY CARE

- Battery deep discharge protection
- Temperature compensating charger
- Built-in automatic and manual battery test feature

SIMPLE TO INSTALL

- Capability to install the UPS into any distribution system (neutral not required on rectifier input)
- Capability to separate the rectifier/bypass power networks and to power these from two separate sources, without Galvanic isolation (necessary on UPS without an output transformer)

HIGH RELIABILITY

- Extremely high short-circuit current to ensure compatibility with the most difficult transformer applications (lighting, drives and industrial processes) and an isolation transformer on the inverter output
- Full microprocessor control with no-break static and manual bypasses
- IGBT technology

OTHER CHARACTERISTICS

- 0.8 power factor makes Sentry HPS suitable for powering ICT and industrial loads
- High level diagnostics: event log with 128 messages, states, measurements and alarms - available from the built-in LCD in several languages
- BACK FEED protection: to avoid energy feeding back into the mains supply should a fault occur

OPTIONS

- Isolation transformers
- Various lead acid battery types including 5 year, 10 year and 20 year design life, VRLA, NiCad options and runtimes up to several hours
- Communications software
- Solutions for low input current distortion
- Closed loop parallel kit option (to be ordered with the unit)

MAXIMUM RELIABILITY AND AVAILABILITY

- Connect up to 8 units in parallel or N+1 redundancy, even of different power ratings.
The UPS continue to work in parallel even if one of the interconnecting communication cables is disconnected (CLOSED LOOP).

LOW CONSUMPTION LEVELS

- Sentry HPS can achieve efficiencies >98% thanks to a selectable Economy Mode which can be used in stable electrical environments to provide power supply continuity should the mains fail.

ADVANCED COMMUNICATION

- Compatible with TeleNetGuard for remote maintenance
- Advanced, multi-platform communication for all operating systems and network environments: Watch&Save 3000 monitoring and shut-down software included, with SNMP agent, for Windows 2008, Vista, 2003, XP; Mac OS X, Linux, Novell and most popular Unix operating systems
- The UPS is supplied with a cable for direct connection to the PC (Plug and Play)
- RS232 double serial port
- Installation slot for an Emergency Power Off (EPO) interface to allow the UPS to be switched off remotely in an emergency.
- Generator interface: enables desynchronisation of the UPS output from a generator supply which may be subject to phase and frequency variations. The interface also enables more economic use of the battery charger.

NO-BREAK POWER ARCHITECTURES

The Sentry HPS range features a wide range of modules and configurations that can be manufactured into one complete system to solve your power problems. Each system is therefore unique and we ask that you consult our engineers for your specific application.

APPLICATIONS

- Servers
- Local Area Network (LAN)
- Data centers
- Telecommunications
- Industrial equipment
- Electro-medical equipment

EXPANDABILITY

The units can be connected in parallel up to 8 units to increase power availability or redundancy.

The single module or the system can be expanded any time to suit power requirements without influencing the initial investment.

Thanks to the peculiarity of the "Hot System Expansion" feature, the additional unit can be connected in parallel while the other units are on-line and supplying regular power to the load. The new UPS is on-line and will be set up automatically.
